

MEMORY LUXE PREMIUM GRAPHENE MATTRESS

In a world where technological advances are developing at a dizzying pace, Lufthous[®] remains true to the visionary and innovative style that precedes it... And it is that being at the vanguard and design have always been our main banners.

No one better than you, who are already part of our family, to be part of our latest release. Introducing the new **MEMORY LUXE PREMIUM GRAPHENE[®]** mattress.

This mattress is made with the raw materials and technology necessary to offer the world of rest something different.

Novelties and advantages should be listed and analysed thoroughly, **starting with its high carbon density HR core.** Thanks to this application, we have created the best possible fitting system; no matter your weight, no matter your height. The mattress will adapt to you, not the other way around.

We have also developed an internal ventilation system, which regulates the thermal factor to which the mattress is subjected, helping to favour its conservation over the years.

Deepening now in the internal design of the mattress, we find its nucleus; a mixture of foamy layers of different densities and firmness. Thanks to this system, **we achieve the greatest comfort for your body.**

Would you like to find out more about the **MEMORY LUXE PREMIUM GRAFENE[®]** mattress? Come with me!

DESIGN AT THE SERVICE OF YOUR REST

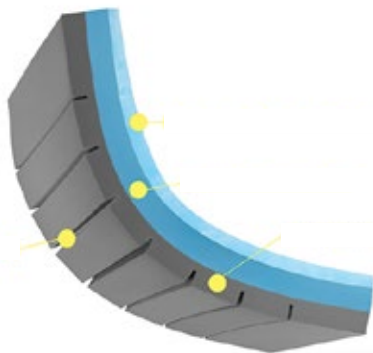

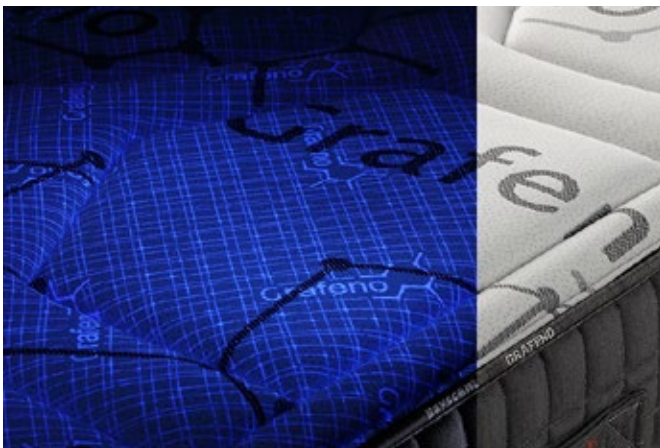

ACTIVE CARBON; THE ULTIMATE RESTING MATERIAL

The **MEMORY LUXE PREMIUM GRAPHENE[®]** mattress used in its viscoelastic composition Super Soft Memory and high-density HR core, with different layers of firmness with active carbon.

The main benefits of active carbon are its high breathability and the ability to eliminate odours. All this helps to prevent the formation of mould and bacteria produced by normal use and sweat.

We have in our hands a product that will allow us to extend the useful life of our mattress and improve the quality of your rest, being an ergonomic mattress with antibacterial fabric.

Thanks to the active carbon it captures and eliminates bad smells helping to evacuate the excess of static electricity body, facilitating rest and giving us a more restful and deep sleep.

GRAPHENE?

Called the “material of the future,”it manifests abundantly in nature. Graphene is an allotropic form of carbon.

It is a very hard and resistant material, but at the same time it is also light and flexible, which allows it to be moulded according to our needs.

It is stronger than diamond and has an extraordinary conduction of heat and electricity.

Stretch fabric with Camomile micro-capsules has a print only visible in UV light. The latest technology at your fingertips applied to the mattress MEMORY LUXE PREMIUM GRAFENO.

STRETCH FABRIC WITH BAYSCENT® CAMOMILE AROMATHERAPY TREATMENT, CREATED BY THE BAYER® LABORATORY

BAYSCENT® finishes have the prestige of having been created by the BAYER®laboratory, and are characterized by the following functionalities in the case of Chamomile.

BAYSCENT® is a line of innovative and excellent quality products used in special textile finishes by TANATEX Laboratories.

These finishes are made from micro-encapsulated essential oils which, when broken, release pleasant aromas, providing additional well-being. The capsules gradually release beneficial essences to ensure maximum effect of their special properties.

From the infusion of the camomile flower, an essential oil is obtained, rich in chamazulene, tiglic acid and several sesquiterpenes; it also contains anthemic acid, a thesterol, anthemene and tannins.

The effects associated with chamomile infusion are digestive, carminative, soothing, tonic, dilating and anti-contractions. The smell of chamomile gives a long-lasting scent to clean clothes.

YOUR REST, OUR GREATEST REWARD

At LuftHous® we are aware of the importance of a good rest for your day to day life. That’s why we never stop researching, looking for the best possible innovations.

All the systems and studies we develop are certified and proven.

The basis of our success is your well-being.

Sweet dreams and thank you once again.
